**DS Precision Engineering Ltd.** originated from the amalgamation of two companies.

Both had been in business for a number of years specializing in the manufacture of precision machined components

We have vast experience producing Low ~ High specification components, from various types of metals such as brass, Aluminium, mild and stainless steels, as well as plastics through to the more exotic such as Monel, Super-Duplex, and Hastalloy.

Being a true Sub-contract company we are able to produce a variety of components, ranging from "one-off" prototype work to medium/large production runs, as well as being able to manufacture fabrications in mild and stainless steels.

Our commitment and ability to meet ever more demanding prices and deadlines whilst maintaining exacting standards, allows us to forge good working relationships with our customers.

This helps to build good communication, confidence and trust and a better understanding of our customers needs, thereby guaranteeing satisfaction and repeat business.

We realise that providing our customers with a single source solution to their sub-contracting headaches is a crucial part of the service. We are happy to take care of all your sub-contract operations, giving you peace of mind that the problem is being taken care of and the assurance that your goods will arrive back completed and on time.

Documented Quality Control Procedures consistent with ISO 9002 are applied to ultimately achieve quality products. Adherence to this policy involves not only the management, but every employee of the company.
